MADE IN ITALY

UNIVERSAL PNEUMATIC GUN FOR SINGLE COMPONENT SEALANTS IN CARTRIDGES

For double component sealants in auto-mixing cartridges (2x24 ml) and single component sealants in cartridges (310 ml)

In case of double component utilization is available an optional piston

This revolutionary system allows the application of one component sealants, silicons and fillers, in standard cartridges and, with the appropriate piston, bags up to 400 ml.

A patented system consisting of a telescopic piston pushes the product with perfect evenness and prevents the compressed air from coming into contact with the product.

Fast air exhaust from the piston under pressure guarantees instant shutdown of product application the moment that the trigger is released.
